**(54) FIXED ASSETS MANAGEMENT DEVICE AND
OPEN TYPE ACCOUNTING PROCESSING
NETWORK SYSTEM**

(57) Abstract:

PROBLEM TO BE SOLVED: To one-dimensionally manage the fluctuation and the present state of fixed assets and the like by transferring data with a data management device through a network and providing a processing means required for the management of fixed assets.

SOLUTION: A CPU 110 control the whole device based on a procedure which a processing means 160 shows, executes individual accounting processings and gives data write/read requests to a data base to a data management device through a network interface 101 and the network 300. A memory 120 stores a first operation system when the processor 160 starts and successively stores the program required prior to

execution. An input device 130 inputs classification data and selects a processing menu displayed on a display device 140. The display device 140 displays a menu required at the time of a device operation and an input screen. A printing/output device 150 outputs printing information required as the processing result of fixed capital by the processing means 160.
